

अग्र-Sandhani (Agra-Sandhani)

Complete Vertical Step-by-Step Manual (All Details Included)

1. Authentication

A. Registration

- Username Input
Details: Enter a unique handle for profile creation.
- Password Input
Details: Enter a secure password.
- Click  Register
Details: Creates new user profile; redirects to login interface upon success.

B. Login

- Username Input
Details: Enter your registered handle.
- Password Input
Details: Enter your account password.
- Click  Login
Details: Authenticates session and issues secure local session token.

Security Throttle: Blocks brute-force attempts. Account locks out for 1 hour after exceeding 20 failed attempts.

2. Master Dashboard Controls

A. Main Header Actions

-  **Create Form:**
Details: Builds a blank form from scratch.
Steps: Click  -> Enter descriptive title in pop-up modal -> Click  Create Form to launch Form Builder directly.
-  **Import Form:**
Details: Auto-generates form structures and populates initial data directly from spreadsheets.
Steps: Click  -> Enter new form name -> Click file selector to upload local .xlsx file -> Click  Import. Parses columns into matching fields and uploads rows.
-  **Manage Delegations:**
Details: Configures temporary access grants to allow other users proxy access to your forms.
Steps: Click  -> Select target user from dropdown -> Select duration (hours, days, or fixed calendar date) -> Click  Create Delegation.
-  **AI Explorer:**
Details: Toggles sliding natural-language query panel for multi-form database exploration.
Steps: Click  to expand/collapse panel.

B. Individual Form Cards

-  **View Submissions:** Opens database tables to browse, filter, sort, edit, or export submitted records.
-  **Open Form:** Launches public-facing page for end-user data entry.
-  **Edit Fields:** Opens Form Builder workbench to edit layout, add fields, or adjust validation limits.
-  **Rename Form:** Toggles inline text editing. Type new title -> Press Enter or click checkmark to save.
-  **Duplicate Form:**
Details: Displays cloning modal with two distinct execution paths:
 1. Duplicate Schema Only: Clones field designs, dropdowns, and rules with zero submissions (for new quarters/batches).
 2. Duplicate Schema & Records: Clones form structure along with complete historical submissions (for backups/sandboxes).
-  **Request Access:** Sends read permission requests to form owners for shared assets.
-  **Delete Form:** Displays safety prompt. Moves form and all submissions into system Trash Bin.

3. Form Builder Workbench

A. Layout & Field Controls

- Click  **Add Field:** Appends a new blank field card at the bottom of the layout.
- Click  **Move Up** /  **Move Down:** Reorders field position in user view.
- Click  **Duplicate Field:** Clones selected field card preserving type, labels, options, and rules.
- Click  **Remove Field:** Deletes selected field card from layout.
- Check ☒ **Required Field:** Makes input mandatory; blocks submission if empty.
- Check ☒ **Unique Field:** Enforces uniqueness per submission (e.g., PIS ID, Roll Number).
- Click  **Save Form:** Saves structure updates. Automatically versions schema if form already contains submissions to preserve past record integrity.

B. Field Type Catalog

Type	DB Format	Full Function & Setup Details
 Short Answer	String	Simple single-line text box.
 Paragraph	String	Multi-line comment area.
 Email	String	Validates email syntax automatically.
 Phone	String	Validates standard 10-digit telephone numbers.
 MCQ	String	Single-selection radio buttons. Click  Add Option to define choice rows.
 Single Choice	String array	Multi-selection checkboxes. Click  Add Option to define choices.
 Dropdown	String	Selection menu. Click  Add Option to define choices.
 Linear Scale	Integer	Slider rating. Select min (0/1), max (2-10), and define endpoint labels.
 Rating	Integer	Visual star rating. Choose star scale (3 to 10 stars).
 Date	Date String	Interactive calendar date selector.
 Time	Time String	Standard time picker.
 Number	Numeric	Numeric entry only. Optional Min Value and Max Value bounds.
 Branch	String	Dropdown pre-populated with engineering branches.
 Duration	String	Dropdown pre-populated with standard durations (e.g., "3 months", "6 months").
 University	String	Type-ahead autocomplete pre-loaded with registered institutions.
 Upload Document	File Path	File attachment uploader; stores files in local server /uploads/ folder.
 Address	String	Compound inputs: House, District, State, Pincode. Stores as House District State Pincode.
 Bank Details	String	Compound inputs: Bank Name, Account Number, IFSC. Stores as Bank: Name A/c: Number IFSC: Code.
 Group	String	Zone and Group inputs. Stores as Zone Group.
 CGPA Converter	String	Inputs for Obtained CGPA, Scale, Factor. Auto-calculates %: $CGPA * (100 / Scale)$. Stores full formula details.

C. Advanced Integration Types

-  **Running Balance:**
Details: Auto-calculates transaction deductions over sequential entries.
Steps: Select Principle Field (starting budget) -> Select Deduction Field (amount spent) -> Select Group By Field (Chain ID / PIS ID for isolated tracking).
-  **Data Link Trigger:**
Details: Automatically fetches and autofills secondary form fields based on a primary lookup key.
Steps: Select Target Form -> Select Lookup Field in Target -> Click  Add Mapping Row -> Map Source (target form field) to Target (current form field).

4. Submissions View Panel

A. Table Operations

- Search Submissions Box: Type query value (Name, ID, Email) to instantly filter visible table rows.
- Sort Mode Dropdown: Changes order (Date Newest/Oldest, CGPA Highest, Branch Alphabetical, or Branch + CGPA).
- Click  Edit (Row): Opens submission in edit view to update values.
- Click  Delete (Row): Marks record as deleted (hidden from active view, saved in audit history).
- Click  Audit Trail (Row): Displays complete modification history (who edited, timestamp, changed values).

B. Export Controls

-  **Export Excel:**
Details: Generates customizable .xlsx spreadsheets.
Steps: Toggle checkboxes (Include Timestamp, Submitter User ID, Remarks Column) -> Click  Pick Fields checklist -> Click  Export.
-  **Export PDF:**
Details: Generates formatted landscape PDFs with auto-font scaling (10pt down to 5.5pt) to fit columns.
Steps: Select columns to include -> Select Group By category (e.g., Branch) -> Click  Export PDF.
-  **Frequency Report:**
Details: Creates monthly pivot chart tabulations.
Steps: Select Tabulate Field -> Select Date Field -> Check target months -> Click  Preview -> Click  Export (Excel, PDF, CSV, or HTML).

5. AI Data Explorer

- Select Query Scope: Check boxes next to form names to search across datasets.
- Search Box Input: Type query in conversational English. Autocomplete shows options; navigate with Arrow Keys and press Enter.
- Click  Run Search: Passes query to local LLM, executes generated SQL on database, and renders matching rows.
- Click  Choose Fields to Export: Opens column selection checklist.
- Click  Excel or  PDF: Downloads search results in chosen format.

6. Admin Panel

- **Users Tab:** Click  Create User to register accounts | Click  Edit User to reset credentials | Click  View Forms to inspect owned assets.
- **Approvals Tab:** Review pending shared form access requests; click  Approve or  Reject.
- **Active Sessions Tab:** Inspect active user logins, login timestamps, and origin IP addresses.
- **System Logs Tab:** Administrative audit trails. Select duration filter (1 hour, 5 hours, 24 hours, 7 days, 30 days).
- **System Health Tab:** Monitors database table sizes, active connection pools, and index scan performance.
- **Trash Bin Tab:** Manage soft-deleted items; click  Restore to recover or  Purge Permanently to wipe data.
- **Delegations Tab:** Manage proxy access; click  Create Delegation or click  Revoke to cancel active grants.
